

THE SCIENCE OF RAPID MUTATION SCREENING

Fast turnaround time

Not just assays,
verified results

CAPTURE. CONFIRM. ACCELERATE.

Rapidly screen melanoma samples using a targeted discovery panel of more than 70 somatic mutations in 20 genes.

Agena Bioscience's MelaCarta™ Panel v1.0 is a set of pre-validated assays for cost-effective, efficient mutation screening to help you rapidly profile beyond *BRAF* and other common mutations.

-  Use tumor samples from fresh, frozen, or formalin-fixed paraffin-embedded tissues (FFPE) and/or cell lines.
-  Analyze multiple loci with as little as 160 ng DNA per sample.
-  Detect and quantify mutation frequencies as low as 5%.

Assays by Agena also offers panels covering additional oncogenes and somatic mutations. See www.agenabio.com/oncology for more information.

THE MASSARRAY WORKFLOW

Each sample is subjected to PCR amplification and primer extension with the MelaCarta Panel v1.0 reagents. The extension products are dispensed onto a SpectroCHIP® Array and detected via MassARRAY® MALDI-TOF mass spectrometry. After the sample run, an automated software report provides the calls and mutation frequency for each sample as well as a confidence score.

THROUGHPUT

The MelaCarta Panel v1.0 contains multiplexed assays in 8 wells. The panel can be run in 24-well format (3 samples per plate), 96-well format (12 samples per plate), or 384-well format (48 samples per plate). Three to 384 samples can be processed per day, providing flexibility in sample throughput and batching requirements.

ORDERING INFORMATION

Choose the best approach for you:
